AC/DC1000W Enclosed Switching Power Supply

LMF1000-20Bxx Series

RoHS

GB4943.1 IEC60601-1 EN 62368-1 BS EN 62368-1

FEATURES

- Wide range Input voltage 90 - 264VAC or 120 - 370VDC
- Accepts AC or DC input (dual-use of same terminal)
- Operating ambient temperature range: -40℃ to +70℃ (Non-condensing)
- High reliability, efficiency up to 94%
- Wide range of adjustable output voltage
- Output short circuit, over-current, over-voltage protection, over-temperature protection
- Support 3+1 parallel redundancy, current sharing
- Built-in active PFC function
- Operating up to 5000m altitude
- Fan speed automatic adjustable
- Double-sided conformal coating process
- 5 years warranty

LMF1000-20Bxx series is one of Mornsun' s enclosed AC-DC switching power supply. It features universal AC input and at the same time accepts DC input voltage, cost-effective, low no load power consumption, high efficiency, high reliability and double or reinforced insulation. These converters offer excellent EMC performance and meet IEC/EN62368, GB4943, IEC60601 standards and they are widely used in areas of industrial, LED, street light control, electricity, security, telecommunications, smart home. etc.

Selection Guide*

Certification	Part No.*	Output Power (W)		Nominal Output Voltage and Current (Vo/Io)	Main Output Voltage Adjustable Range (V)	Efficiency at 230VAC (%) Typ.	Max. Capacitive Load (μF)
EN/IEC CCC/ BIS	LMF1000-20B12	960	Main	12V/80A	12-14.4	92	40000
		10	Auxiliary	5V/2A	/		1000
	LMF1000-20B15	960	Main	15V/64A	15-18		20000
		10	Auxiliary	5V/2A	/		1000
	LMF1000-20B24	1008	Main	24V/42A	24-28.8	94	10000
		10	Auxiliary	5V/2A	/		1000
	LMF1000-20B27	1007	Main	27V/37.3A	27-32.4		8000
		10	Auxiliary	5V/2A	/		1000
	LMF1000-20B36	1008	Main	36V/28.8A	36-43.2		6000
		10	Auxiliary	5V/2A	/		1000
	LMF1000-20B48	1008	Main	48V/21A	48-56		4000
		10	Auxiliary	5V/2A	/		1000
EN/IEC CCC	LMF1000-20B54	1009	Main	54V/18.7A	54-58		3000
		10	Auxiliary	5V/2A	/		1000

Note:1.*For all applications, please refer to LMF1000-20Bxx Series Power Supply Application Notes.

2.*Before powering on the product, please confirm whether the control signal connection terminal (CN2) Pin6 (PS_ON) and Pin7 (GND) short-circuit jumper cap are connected. If not, the product without output. When the control signal connection terminal (CN2) of the product are external connected as a whole, please ensure that Pin6 and Pin7(or Pin14) are short-circuit connected. MORNSUN has JPS-047 jumper terminals for sale. Please refer to LMF1000-20Bxx Series Power Supply Application Notes: 2.10 Remote control.

3.*When using the current sharing function for all models, do not directly increase the load on the system beyond the rated load of a single prototype when the power is turned on for the first time.

Input Specifications

Item	Operating Conditions	Min.	Typ.	Max.	Unit
Input Voltage Range	AC input	90	--	264	VAC

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

	DC input		120	--	370	VDC
Input Voltage Frequency			47	--	63	Hz
Input Current	115VAC		--	--	12	A
	230VAC		--	--	6	
Inrush Current	115VAC	Cold start	--	20	--	
	230VAC		--	40	--	
Power Factor	115VAC	Room-temperature, full load	PF≥0.99			
	230VAC		PF≥0.95			
Contact Leakage Current	240VAC		<0.5mA			

Output Specifications

SDA, SCL for I 2 C			Internal 2.4 kΩ pull-up resistor to internal 3.3 V			

Note:1.*If the product is used in medical equipment, the terminal system should shield the LED signal light to meet the medical certification requirements that operators should not see the indicator light after the product is installed.
2. *Please refer to LMF1000-20Bxx Series Power Supply Application Notes for relevant function control logic and instructions.

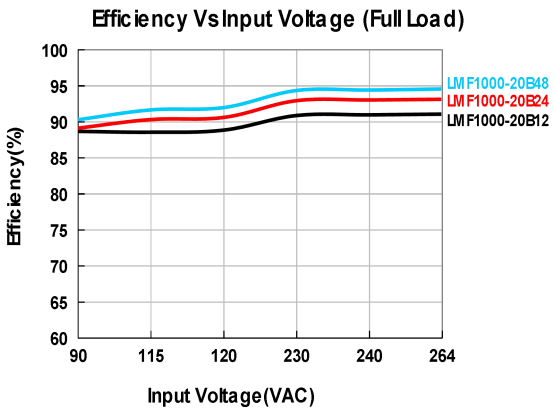

Product Characteristic Curve

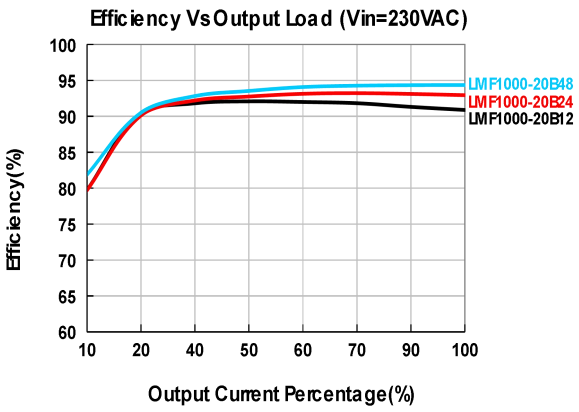

Note: With an AC input voltage between 90-100VAC and a DC input between 120-185VDC the output power must be derated as per the temperature derating curves.

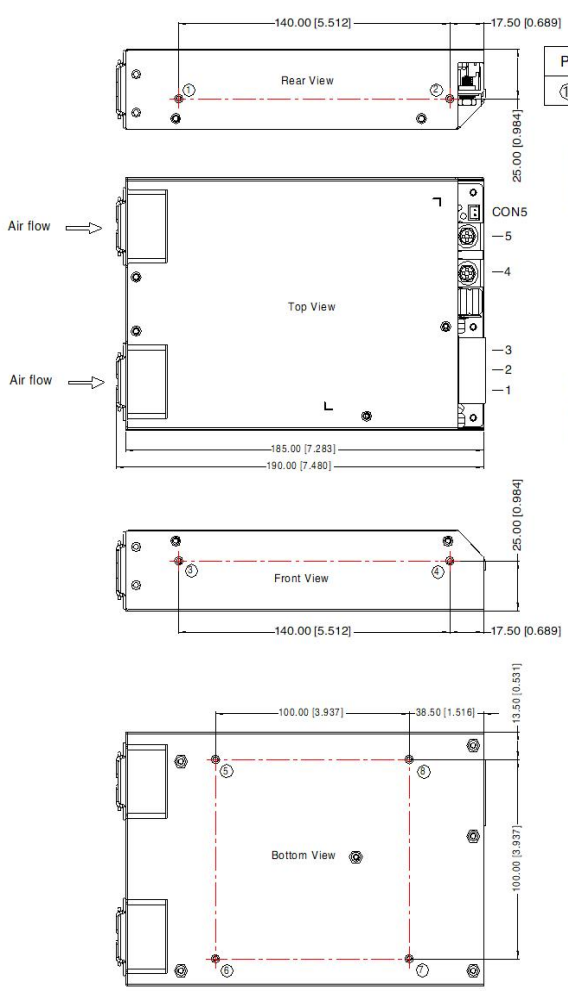

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

Note:
The product is equipped with a built-in cooling fan. Keep the air intake clear of debris. If the environment cannot meet this requirement, a fanless model is recommended.

Dimensions and Recommended Layout

General tolerances: ±1.00[±0.039]

CAUTION: Double pole, neutral fusing. Disconnect mains before servicing.

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

Note:

1. For additional information on Product Packaging please refer to www.mornsun-power.com. Packaging bag number: 58220701;
2. Unless otherwise specified, parameters in this datasheet were measured under the conditions of Ta=25℃, humidity<75%RH with nominal input voltage and rated output load;
3. The room temperature derating of 5℃/1000m is needed for operating altitude greater than 2000m;
4. All index testing methods in this datasheet are based on our company corporate standards;
5. In order to improve the efficiency at high input voltage, there will be audible noise generated, but it does not affect product performance and reliability;
6. We can provide product customization service, please contact our technicians directly for specific information;
7. Products are related to laws and regulations: see "Features" and "EMC";
8. The out case needs to be connected to PE (⏚) of system when the terminal equipment in operating;
9. The output voltage can be adjusted by the ADJ, clockwise to decrease;
10. Our products shall be classified according to ISO14001 and related environmental laws and regulations, and shall be handled by qualified units;
11. The power supply is considered a component which will be installed into a terminal equipment. All EMC tests should be confirmed with the final equipment. Please consult our FAE for EMC test operation instructions.
12. In the appearance dimension drawing, ±Vo represents the main output, ±S represents the auxiliary output, and the auxiliary output can be selected by the customer, which has no effect on the main output.

Composition structure description

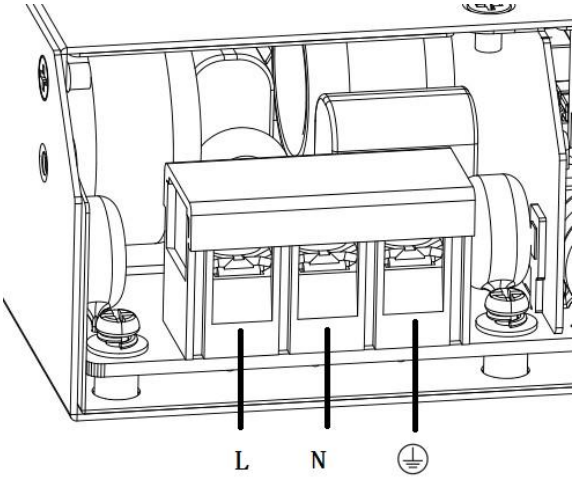

1.AC/DC input terminal (J1)

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

2.DC main output terminal (J2, J3)
3.Auxiliary road output terminal (CON5)
4.Green and red status display LED lights
5.Signal connection Press the terminal (CN2)
6.Output voltage regulation knob
7.Fans

1.1 AC/DC Input Terminal Block (J1)

The input terminal J1, as a standard 3-pin fence welding terminal with upper cover, the center spacing of the pins is 10mm.

Pin	Features
L	Line (Phase)
N	Neutral
⏚	Ground/Earth

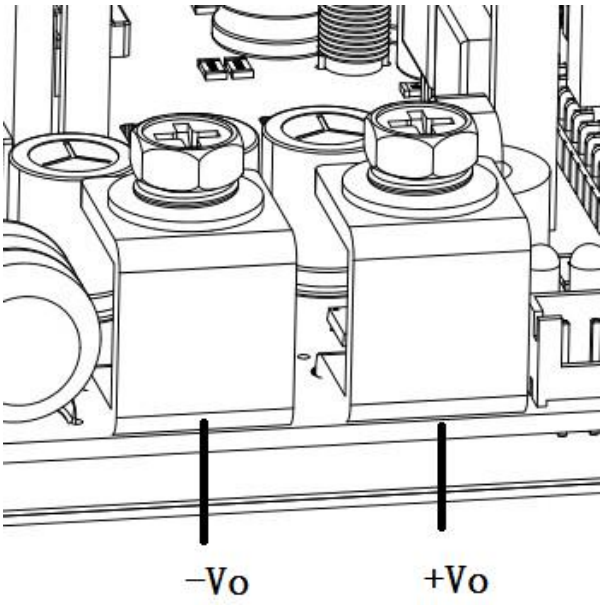

Wire size: 22-12 AWG
Torque: 0.9Nm

1.2 Main DC Output Terminal (J2, J3)

The output terminal J2, J3, with two standard screw lock type metal terminals, the pin spacing between each is 18mm.

Pin	Features
+Vo	Main Output +
-Vo	Main Output -

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

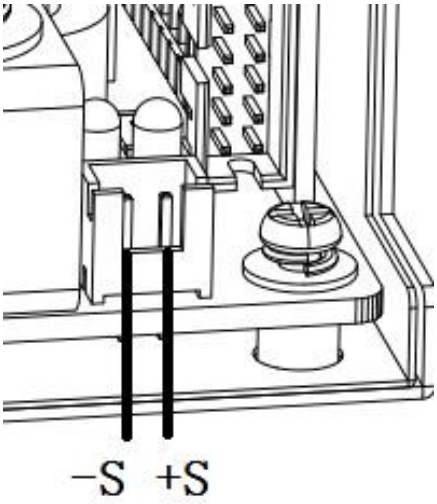

Wire size: 4 -12 AWG

Torque: 2.3Nm

1.3 Auxiliary DC Output Terminal (CON5)

The auxiliary output terminal with a standard terminal of 2.5mm pitch.

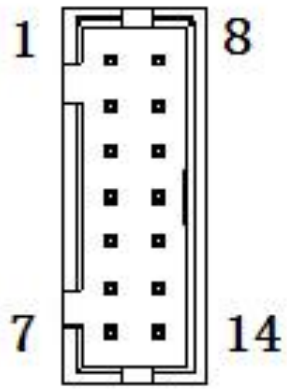

Pin	Function
-S	Auxiliary DC Output -
+S	Auxiliary DC Output +

1.4 Signal Port (CN2)

Pin	Label	Features
1	VS+	Remote compensation positive end
2	CURRENT SHARE	Current sharing bus
3	DC_OK	DC_OK Signal

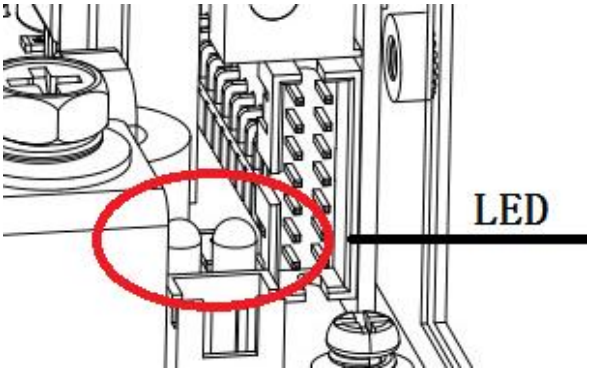

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

4	SCL	I2C communication line
5	SDA	I2C communication line
6	PS_ON	Remote Control signal
7	GND	Signal terminal reference ground
8	VS-	Remote compensation negative terminal
9	ADDRESS0	ADDRESS code 0
10	ADDRESS1	ADDRESS code 1
11	ADDRESS2	ADDRESS code 2
12	RXD	Serial communication
13	TXD	Serial communication
14	GND	Signal terminal reference ground

Note: The reference ground of all pins on the signal terminal is pin7 and pin14. Pin 12,13 are reserved and have no actual function.

1.5 Green And Red Status Display LED Lights

Two kinds of LED lights indicate difference working states of the power supply :

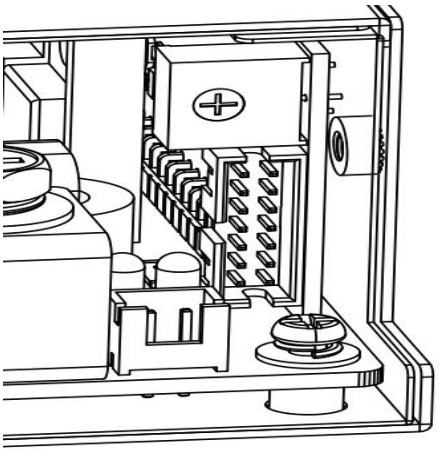

Green LED	Red LED	Status

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

ON	OFF	Normal work
OFF	ON	Main or auxiliary road alarm
OFF	OFF	No AC input

1.6 Output Voltage Adjustment Knob

Turn counterclockwise to increase output voltage

Model	Rated Ouput Voltage	Adjustable Range Of Output Voltage
LMF1000-20B12	12V	12 - 14.4V
LMF1000-20B15	15V	15 - 18V
LMF1000-20B24	24V	24 - 28.8V
LMF1000-20B27	27V	27 - 32.4V
LMF1000-20B36	36V	36 - 43.2V
LMF1000-20B48	48V	48 - 56V
LMF1000-20B54	54V	54 - 58V

2. Function Manual

2.1 Input Requirements

The AC input voltage and DC input voltage must be within the defined voltage range (refer to datasheet), otherwise the power supply may not work properly or even malfunction.

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

The internal L and N line of the power module have been connected in series with a 250V 20A fuse. For better protection, it is recommended that customers use a circuit breaker not greater than 20A. (Non-mandatory requirement).

2.2 Output Requirements

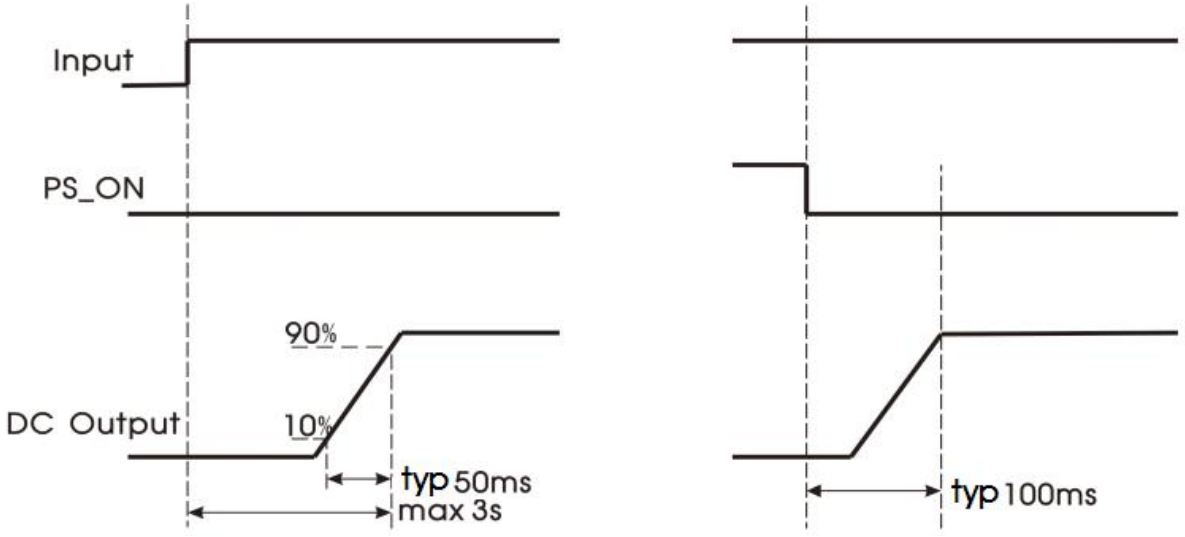

Main Output

At any voltage value, the maximum output current and power must not exceed the rated/specified value. The output current must not exceed the maximum output current value.

Auxiliary Output

The auxiliary circuit supports a maximum current of 2A.

2.3 Start-up Timing

Item	Operating Conditions		Min.	Typ.	Max.	Unit
Power-off Hold Time	Room temperature, full load	115VAC output	--	12	--	ms
		230VAC output	--	12	--	
Start Delay Time	230VAC, full load		--	--	3	s

2.4 Fan Speed Control

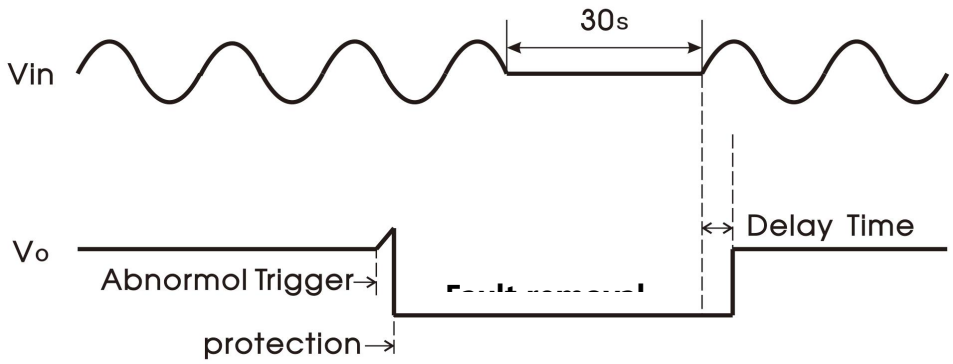

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

The fan speed is determined by the ambient temperature and output power and linearly adjusted. When the ambient temperature is greater than 45℃ and the output power is greater than 600W, the fan reaches 100% speed. In order to improve the reliability of the power supply module, the fan keeps a minimum speed of 10% when the ambient temperature is higher than -5℃ under no load; the fan will stop rotating when the ambient temperature is lower than -5℃.

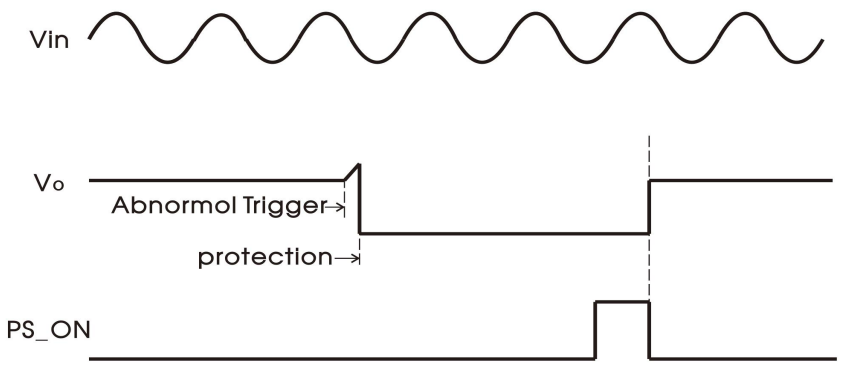

2.5 Output Over-voltage Protection (OVP)

Main Output

The over-voltage protection function is to close the main output when the output voltage reaches the protection voltage value. When the main circuit over-voltage protection occurs, the main circuit output voltage of the module will be shut off, and the auxiliary circuit output will not be affected. The main circuit output can be restored after disconnecting the input power for at least 30 seconds.

In addition, it can be quickly restarted by the PS_ON signal:

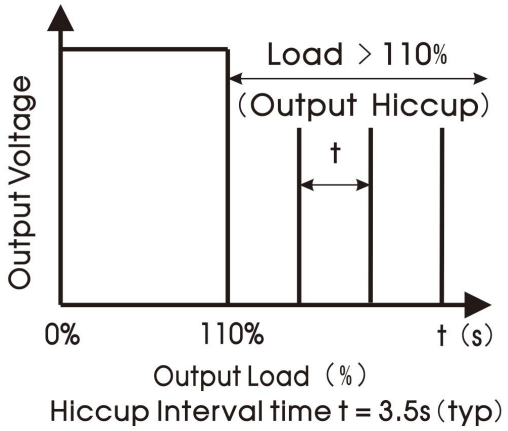

Auxiliary Output

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

When the auxiliary circuit voltage reaches 7Vdc (maximum value), the auxiliary output will be in hiccup status, and the main circuit without output until the auxiliary output returns to normal after the fault is eliminated.

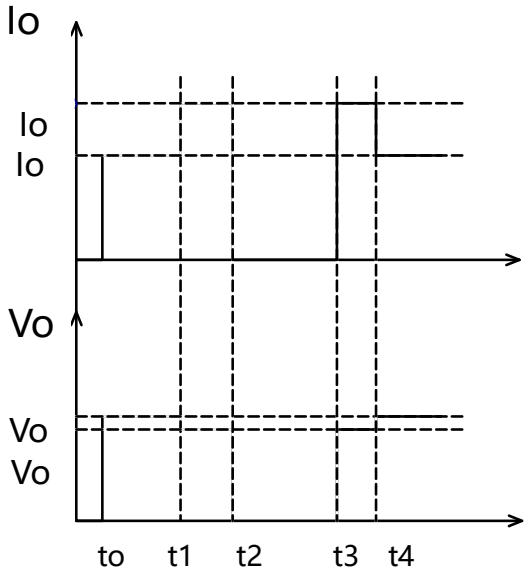

2.6 Output Over-current Protection (OCP), Peak Power

Output over-current protection (OCP)

When the output current exceeds 110% (minimum) of the rated output current, the DC output will be off. The OCP protection function adopts hiccup mode. After the over-current condition is eliminated, the main output will automatically recover, and the auxiliary output will not be affected.

Peak power

t0-t1 moment: The output current is nominal Io, and the output voltage is nominal Vo;

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

t1-t2 moment: The output current Io' is 140%Io* (170%Io*), the output voltage Vo<Vo' and the maintenance time is 300ms;

t2-t3 moment: The output power off, the protection time is about 3s;

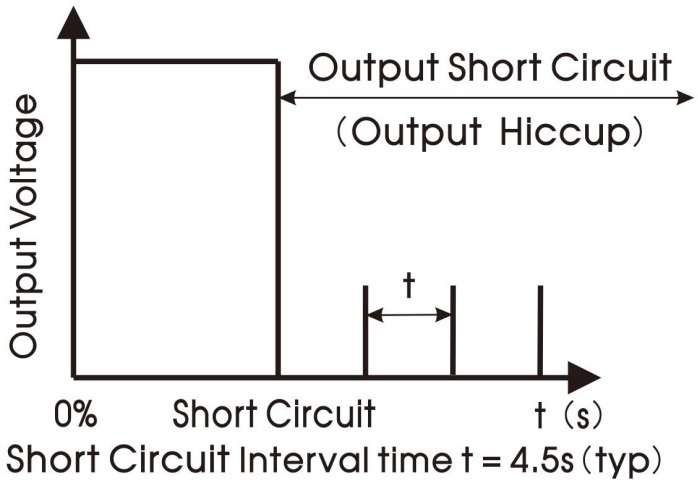

t3-t4 moment: The output current Io' is 140%Io* (170%Io*), and the output voltage Vo<Vo' . When the maintenance time is less than 300ms and the output load returns to the normal range, the output voltage will recover.

Note:140%Io is the load at 115V input; 170%Io is the load at 230V input.

2.7 Output Short Circuit Protection (SCP)

When the main output is short-circuited, the power output in hiccup with interval 4.5s. After the short-circuit is removed, the power module will automatically return to normal, and the auxiliary output will not be affected.

When the auxiliary circuit output is short-circuited, the main circuit has no output, after the short circuit is eliminated, the auxiliary output automatically recovers to normal, the main output voltage automatically recovers or the input restarts to normal.

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

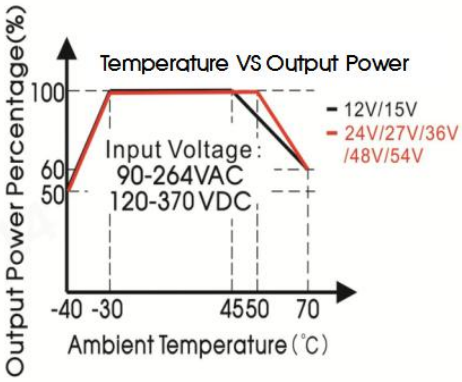

2.8 Over Temperature Protection (OTP)

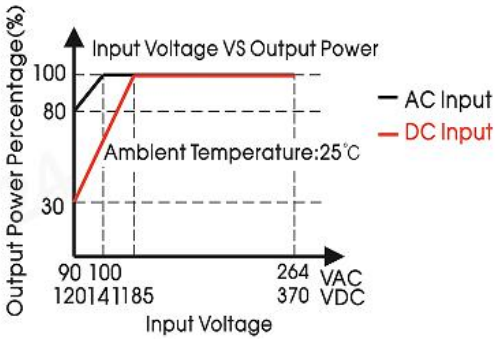

When the ambient temperature of the power supply exceeds the rated temperature for a period of time, the power supply will be turned off and the power supply will resume normal operation after the ambient temperature drops to the set value.

2.9 Output Power Derating

When the input voltage is greater than 100VAC (or 185VDC), only need to derate according to the temperature derating curve;

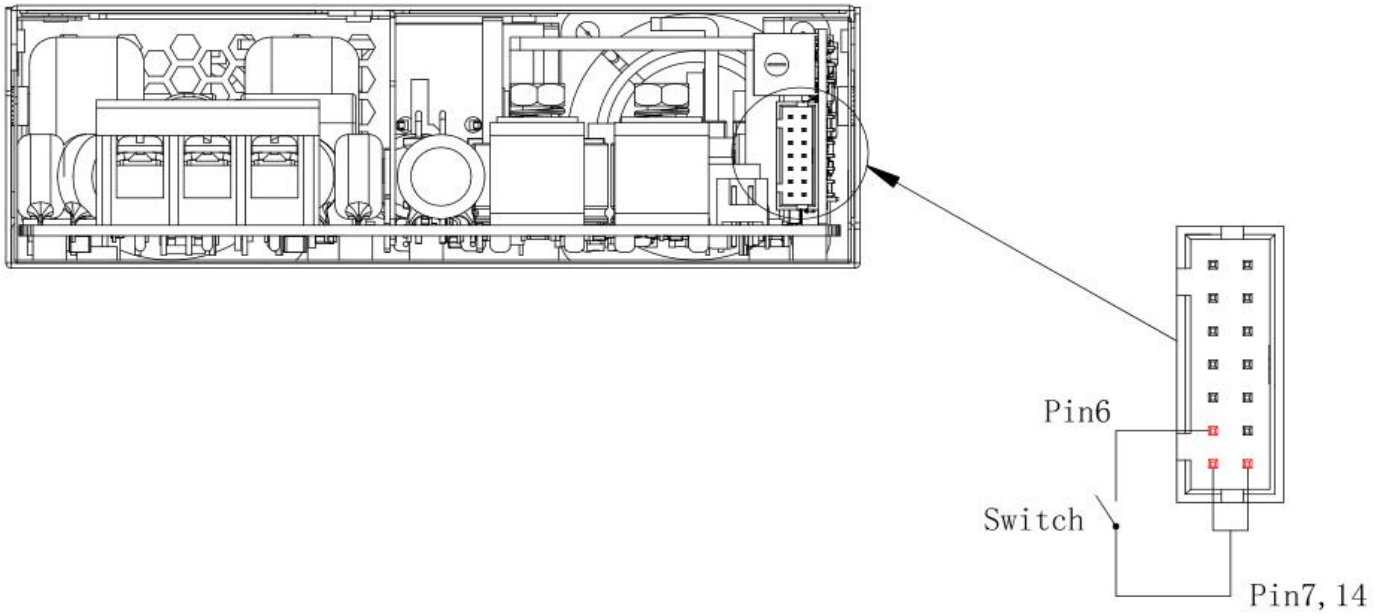

When the input voltage is lower than 100VAC (or 185VDC), the output power will be derated according to the following input voltage derating curve after temperature derating.

2.10 Remote Control

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

PS_ON (Pin6) and GND (Pin7or	Output status
Short-Circuit	Output on
Pin Floating	**Output off**

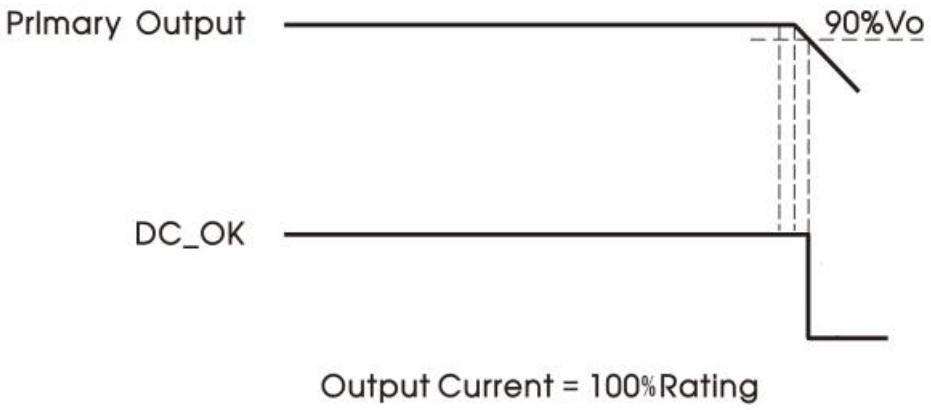

If the input terminal of the power module has been connected to a power source, the PS_ON signal pin can be used to control the on and off of the main output, and the PS_ON signal does not affect the output voltage of the auxiliary circuit. Note: The internal PS_ON input impedance of the module is 5.1K.

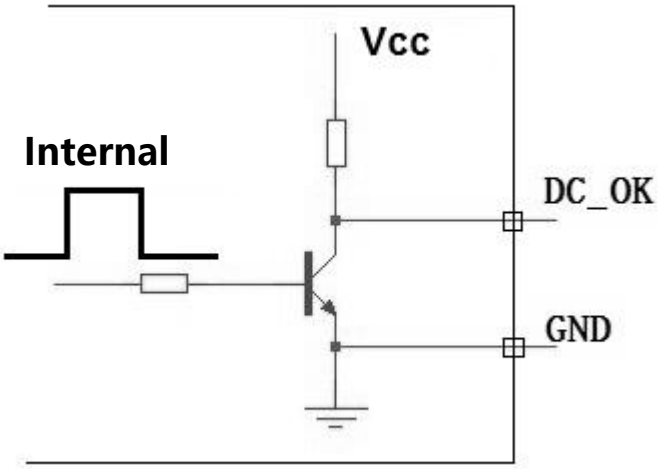

2.11 DC_OK Signal

The DC_OK signal is used to monitor whether the power supply is working normally, and the signal is at Pin3 of the signal terminal CN2.

Note: When the DC_OK signal is connected to the external circuit, the impedance of the external external circuit (i.e. between Pin3 and Pin7 or Pin14 of CN2) is not less than 10kΩ.

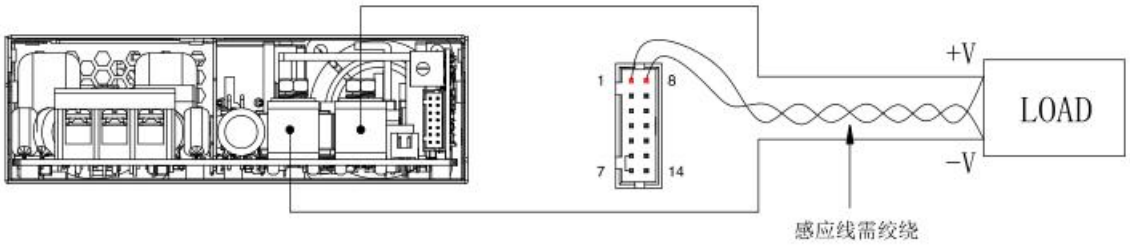

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

DC_OK (Pin3) and GND (Pin 7 or Pin	Output state
2.5 - 5V	Output on
0 - 0.5V	Output off

2.12 Remote Compensation

Interleave

Note: 1. VS+ and VS- cannot be shorted or reversed, otherwise the power module will be damaged.

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

2. Before powering on the product, please confirm whether the control signal connection terminal (CN2) Pin6 (PS_ON) and Pin7 (GND) short-circuit jumper cap are connected. If not, the product without output. When the control signal connection terminal (CN2) of the product are external connected as a whole, please ensure that Pin6 and Pin7(or Pin14) are short-circuit connected. MORNSUN has JPS-047 jumper terminals for sale. Please refer to LMF1000-20Bxx Series Power Supply Application Notes: 2.10 Remote control.

Pin 1 and pin 8 of the signal terminal CN2 can compensate the voltage drop on the output cable.

The remote compensation circuit can compensate up to 200mV cable voltage drop. This voltage includes the sum of the cable drop connected to the output positive terminal and the output negative terminal.

If you need to use the remote compensation function, the signal pin needs to be connected with the load end with a twisted pair cable.

2.13 Parallel Operation

2.13.1 Redundancy

The power module output can be connected in parallel to achieve redundancy, thereby improving system reliability. The maximum power of the redundant system needs to be derated to ensure that the redundant system can still meet the rated load requirements when a power supply module fails. The current common practice is to construct a redundant system by the N+1 method, that is, N+1 power supplies are connected in parallel, to support the maximum load current N*Iomax, where Iomax is the rated output current of each power supply. For example, the rated output current of each power supply is 40A, and 3+1 units are connected in parallel to construct a 3*40A=120A redundant system.

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

The power module supports 3+1 parallel redundant operation.

The ORing circuit is used inside the power module, and when any one of the power modules in the parallel fails, it will not affect the work of other power modules.

When used in parallel, the maximum load current cannot exceed the maximum output current of a single power supply module, otherwise the whole parallel power supply module will not start normally.

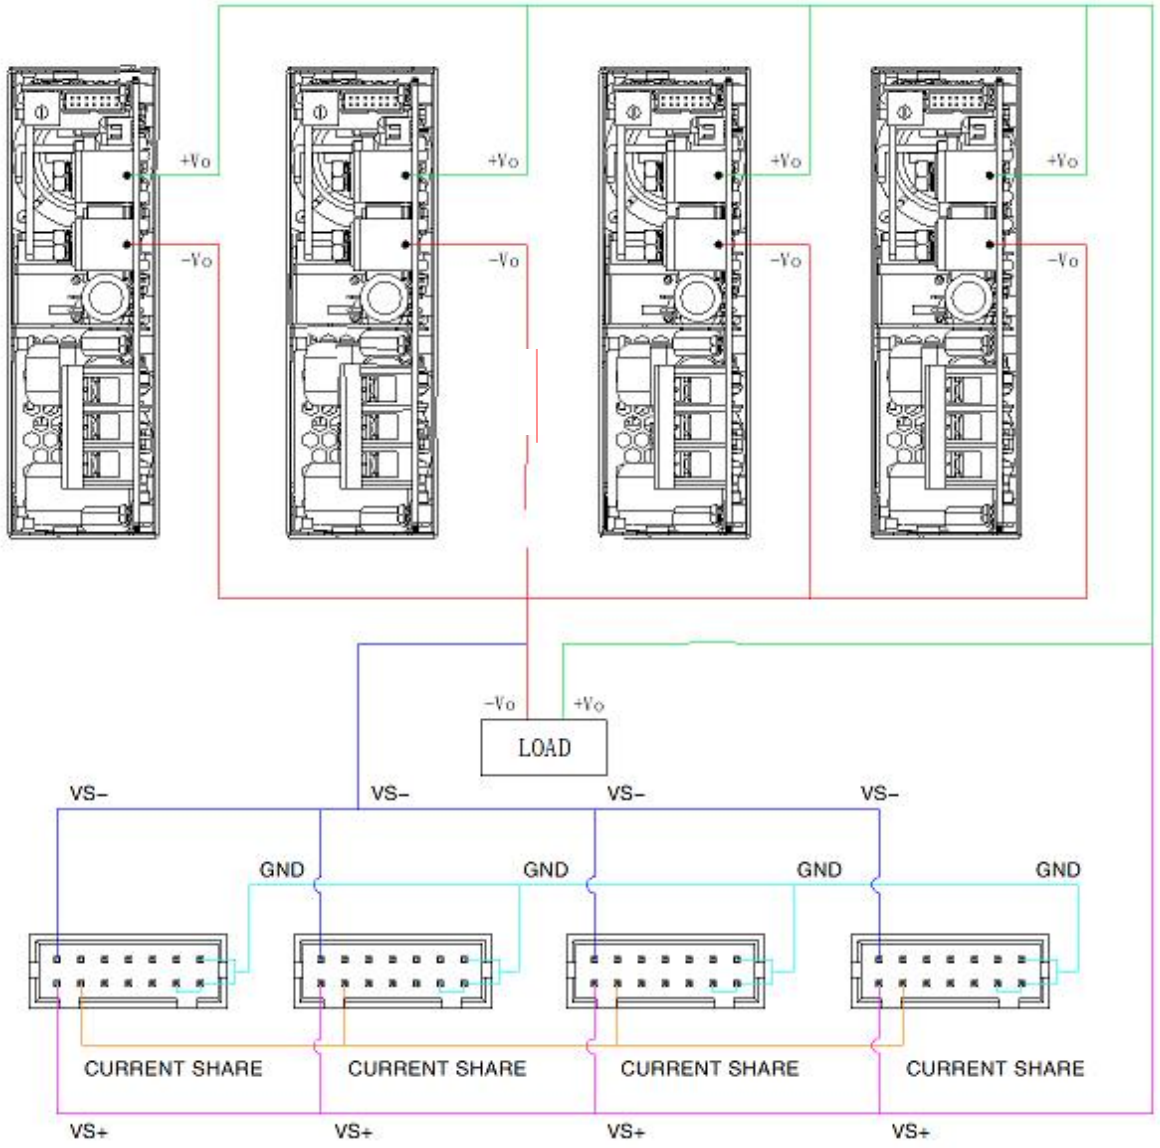

2.13.2 Current Sharing

Method 1：current sharing bus and remote compensation lines are both connected.

For load line loss ≤ 200mV, and the output voltage difference of each single module ≤ 50mV, this type of connection is recommended to obtain a better line-end output voltage and current sharing effect.

The wiring method of the current sharing function is shown in the figure below：

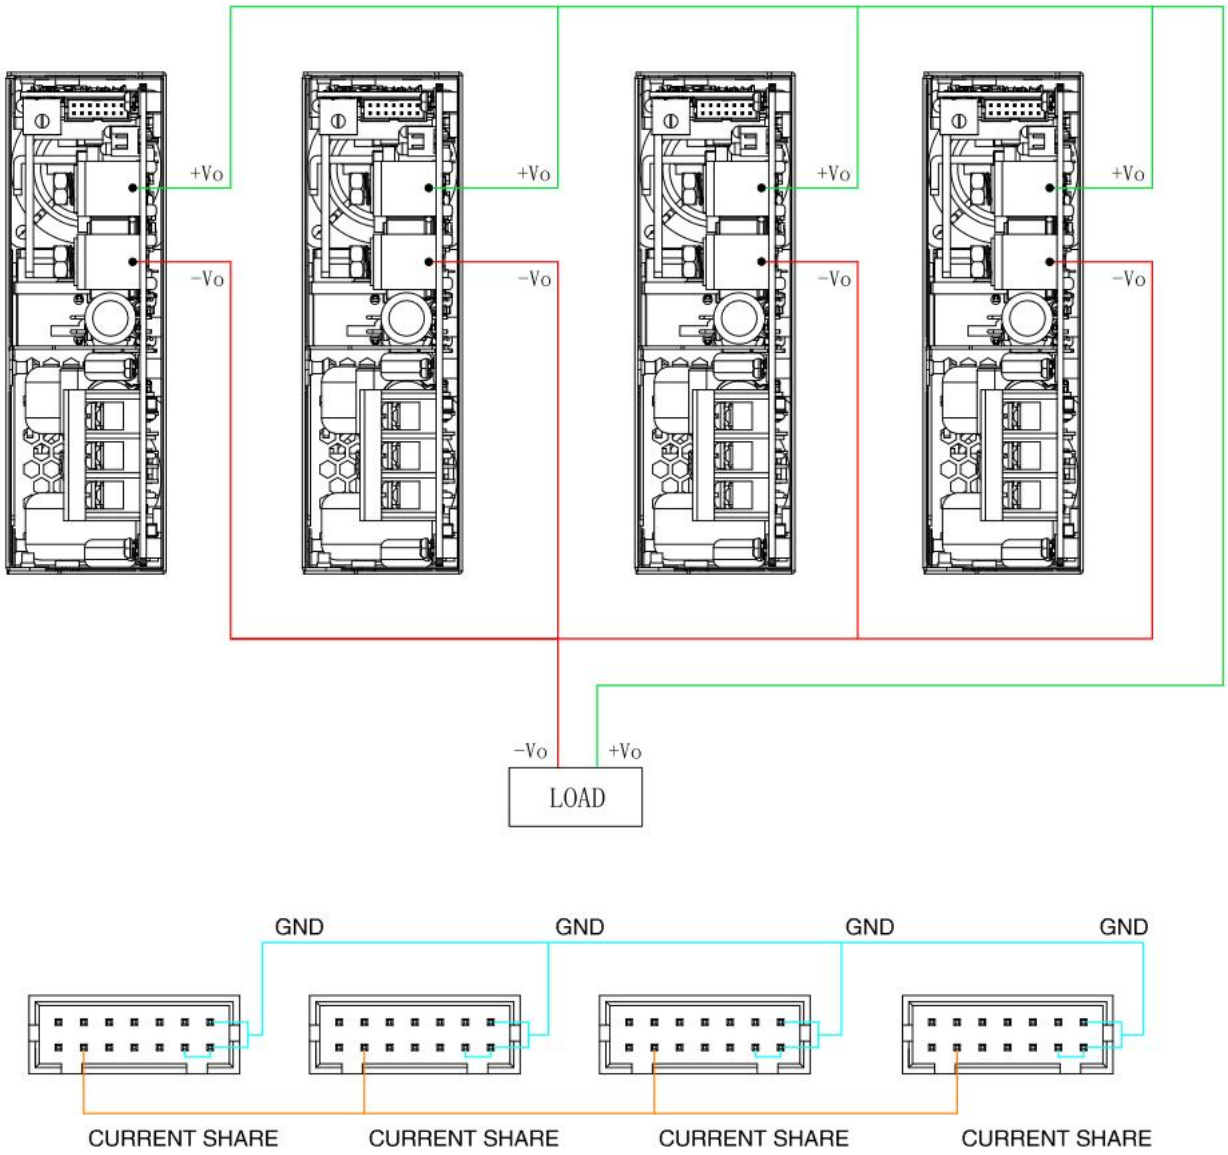

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

Method 2：Only the current sharing bus is connected, and the remote compensation is not connected.

For the load line loss > 200mV, or the output voltage difference of each single module cannot or does not need to be accurately adjusted to < 50mV, this type of connection is recommended to obtain a better current sharing effect of the parallel machine. In the same way, when the load loss is unknown or the current sharing fails to meet the specifications under the first connection method, it is recommended to replace it with this connected method. The wiring method of the current sharing function is shown in the figure below：

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

Note:

1. When using in parallel, the number of parallel modules cannot exceed 4.

2. Before powering on the product, please confirm whether the control signal connection terminal (CN2) Pin6 (PS_ON) and Pin7 (GND) short-circuit jumper cap are connected. If not, the product without output. When the control signal connection terminal (CN2) of the product are external connected as a whole, please ensure that Pin6 and Pin7(or Pin14) are short-circuit connected. MORNSUN has JPS-047 jumper terminals for sale. Please refer to LMF1000-20Bxx Series Power Supply Application Notes: 2.10 Remote

control.

When power modules work in parallel, there is an internal active current sharing circuit to ensure that the current between each module is balanced.

The active current sharing circuit adopts the automatic master-slave current sharing method. Each power module has a current sharing bus signal (CURRENT SHARE BUS). When working in parallel, the current sharing bus of all power modules must be connected together. The current-sharing bus signal is located at pin 2 of CN2.

The output voltage of each power module will affect the current sharing accuracy. The output voltage of the power module is the rated voltage ±50mV. In practical applications, if the output voltage value needs to be adjusted, the output voltage of all parallel power supply modules needs to be adjusted to the same voltage. The recommended voltage range: target voltage value ±50mV

After the output load of each power module is greater than 50% of the rated load, the current sharing accuracy should be ±5%. The current sharing calculation formula is:

$$\text{Current sharing accuracy} = \frac{Io\max - Io\min}{Io\max} * 100\%$$

Iomax: the maximum output current value in parallel power supply modules.

Iomin: the minimum output current value in parallel power supply modules.

3.Signal lines(such as remote compensation lines, current sharing lines, etc.)should be kept away from areas or lines with high interference(such as input lines, high-current lines, motor drives, high-frequency lines, etc.), avoid interference to the signal lines.

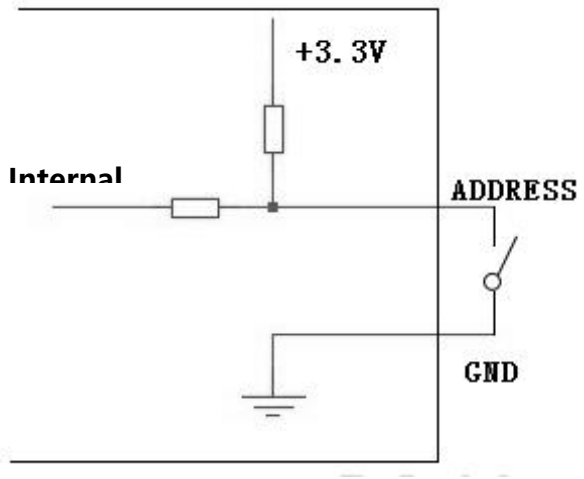

4.To ensure that the output voltages of each module are consistent, the load line losses are minimized, and they are the same, it is recommended that the output lines of the modules be made of metal materials with a uniform diameter.

2.14 I2C Communication Address

In the parallel system, if you need to identify the power module information, you need to set the I2C communication address for each parallel power module, and exchange data with the host computer through I2C. The setting of the communication address is determined by pins 9, 10 and 11 of the signal terminal CN2. When these three pins are short-circuited with pin 7 or 14 of CN2, it will be low level (L, voltage range: 0 - 1.31V). When disconnected, it is high level (H, voltage range: 1.99V-3.3V)， one bus can match up to 7 prototypes for communication. The specific address number is shown in the table below:

ADDRESS 2	ADDRESS 1	ADDRESS 0	Address number
L	L	L	0
L	L	H	1
L	H	L	2
L	H	H	3
H	L	L	4
H	L	H	5
H	H	L	6
H	H	H	7

The internal pull-up resistance value of the power module is 10kΩ, and the external impedance can be matched according to the actual application to meet the high and low voltage range.

3. Installation Requirements

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

3.1 Safety Introduction

Warning

Risk of electric shock

During high voltage operating

- The power supply module is disconnected from the input DC or the AC power and placed for at least one minute before starting to operate it.
- When installing the input wire to the power module, please connect the ground terminal first, and then connect the L line and the N line.
- When removing the input wire, please remove the L wire and the N wire first, and then remove the ground wire.
- When disassembling, make sure that no objects fall into the power module.
- Pay attention to high temperature.
- After the power module is working in a high temperature environment, wait for its shell to cool down before operating.
- This product needs to be installed by professionals and needs to be used with other equipment.

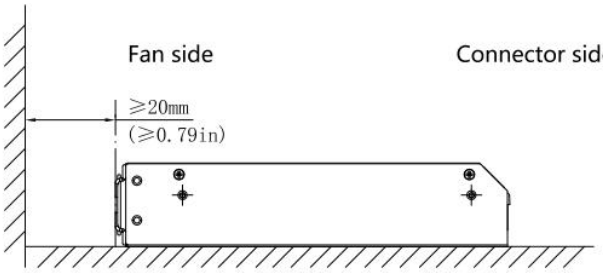

3.2 Safety Requirements

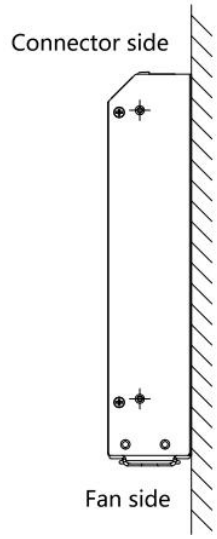

When installing, pay attention to the primary side and the protective ground, the creep distance and the electrical clearance of the primary side and the secondary side refer to EN60601-1.

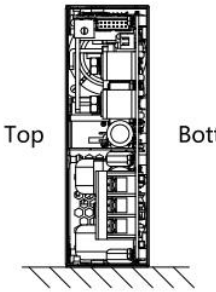

3.3 Installation Method

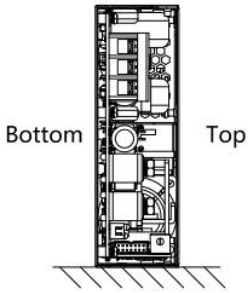

Standard mounting orientation:

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

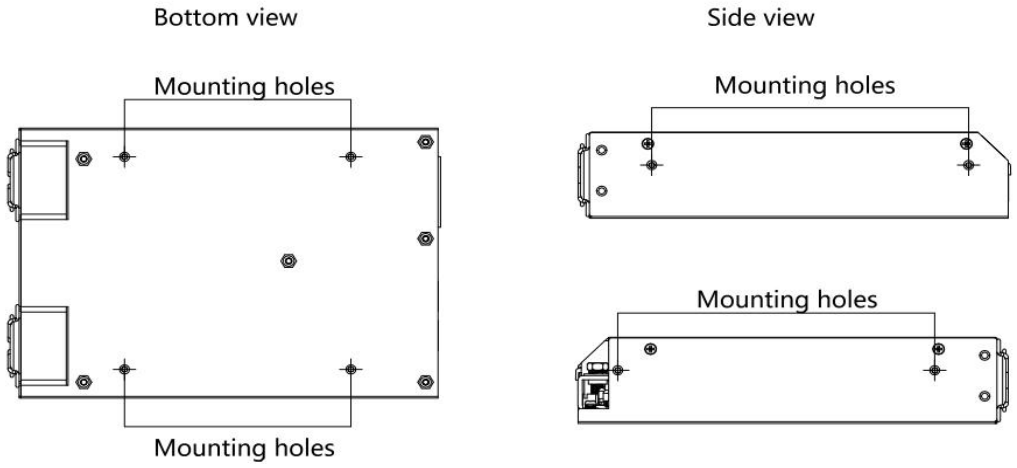

Position of mounting holes:

Note: The fan panel cannot be blocked by other objects, and a distance of at least 20mm must be maintained, otherwise it will affect the heat dissipation and performance of the power module.

4. Communication Protocol

The LMF1000-20Bxx series power modules support standard communication protocols and manage

MORNSUN Guangzhou Science & Technology Co., Ltd. reserves the copyright and right of final

and monitor the power modules through I2C bus.

Command	Command Name	Access	Data	Data Format	Description
